UDAPEOPLE Benefit of CI/CD to the company

A PROPOSAL BY MICHAEL OGUNLANA

What is CI/CD

Continuous delivery is an engineering paradigm in which teams produce and release value in the shortest cycle.

Continuous integration is the merging of various developers code into a single repository numerous times a day. This makes it easy to detect integrations errors early enough. Therefore foster collaborative development.

How Can CI/CD be Beneficial?

This app is built to help startups focus on the their customers. Adapting continuous integration and continuous deployment in our product will see our team delivering working features faster and consistently to our clients. Our clients will be happier with our services and our company will generate tremendous amounts of revenue as a result

Deployment is automated

This means that there are few or none human checks which therefore erase any occurrence of human error. The company therefore will avoid unnecessary time wasting and wasting of funds .

Deployment is automated

This means that there are few or none human checks which therefore erase any occurrence of human error. The company therefore will avoid unnecessary time wasting and wasting of funds .

Features are released faster

The company get to dish out new value-generating features faster and easily .Every time a feature is developed it is availed to our clients instead of bundling them and releasing them all at once. This will result in an increase in revenue

Conclusion

With this approach to our app, this will increase the value of the services we deliver to our customers.
